Web Programming I
ITS 210

Homework 1

Goals	To become familiar with elementary HTML and FTP.
Background for all homework and project assignments	I will create a directory for on you on my website. We'll go over in class how you access it via FTP. Store all your homework, projects, in-class labs, and anything else we do in there.
Instructions	Create your own web site with the following features:

1. Home Page - *10 points*
   - Filename: index.html
   - Contents
     ‣ Your name
     ‣ Class name
     ‣ mailto: link to send you e-mail
     ‣ Quote of the week
     ‣ Table of contents: links to:
       - Homework pages
       - Project pages
       - Lab pages
2. Essay - Content - *20 points*
   - Write an essay about eroding privacy on the Internet and whether or not privacy is a myth. Include at least one paragraph for each of the following sections:
     ‣ Background - Frame the discussion.
     ‣ Cookies: Tasty or Terrible?
     ‣ How sites gather your data.
     ‣ What you can to stop sites from harvesting your data.
     ‣ Is privacy just a myth?
     ‣ Conclusion and Recommendations
     ‣ References (at least four)
   Feel free to add more as you like. This is just a minimum outline.
3. Essay - Structure - *20 points*
   - Present your essay on a web page. Format it nicely so that it has a similar look and feel to what you'd expect to see in a magazine.
   - Include a link to it from your home page.
   - Include a link from it back to your home page.
   - Begin with a table of contents that gives the titles of each section and internal links to each.
   - Present external links for each reference.

Submitting	Upload your entire site to your directory on my server via FTP as we discussed and practiced in class.
